

ABSTRACT

A throat, mouth and/or gum sprayable pharmaceutical preparation in the form of an aqueous solution. One embodiment of such a solution may comprise:

- a non-steroidal anti-inflammatory drug (NSAID) also having analgesic activity;

- a biologically compatible buffer consisting essentially of an organic amine selected from at least one D-glucamine, meglumine, trometamol (tris buffer) and a mixture thereof, in a quantity suitable for buffering the pH of the preparation within the range of between about 6.5 and about 8.0; and

- pharmaceutical grade water;

- wherein the NSAID is flurbiprofen.
